IT Automation · AI-Assisted Development · AI Model Evaluation

Developer who uses AI coding agents to build and ship practical tools fast: desktop apps, mobile web apps, Python utilities and cloud-hosted services. I currently evaluate large language model output professionally, so I know where AI is reliable and where it needs checking. Earlier hands-on work with hardware, inventory and written procedures in a production environment. Looking for a role automating IT and business workflows.

Skills

- **AI & automation:** Claude Code and AI coding agents, OpenAI API, prompt design, LLM output evaluation with rubrics, Google/YouTube APIs
- **Languages:** Python, JavaScript, C#, Java, HTML/CSS
- **Frameworks:** React, Preact, React Native (Expo), Node.js/Express, Electron, Vite
- **Cloud & data:** AWS Amplify, Railway, Supabase, SQLite, IndexedDB, GitHub Releases with auto-update
- **Practices:** Git/GitHub, automated tests (pytest, Vitest), written specs and plans, technical documentation
- **Other:** hardware assembly and installation, inventory management, Microsoft Excel, Word, PowerPoint

Selected Projects

YouTube Channel Tracker — Electron, React, SQLite, YouTube API

- Built a Mac desktop app that manages a video production pipeline from idea to published video, pulling channel data from the YouTube API.
- Shipped it through GitHub Releases with automatic updates, so users get new versions without reinstalling.

Private Lessons Tracker — Preact, TypeScript, IndexedDB, PWA

- Built a mobile app for a private music teacher that tracks students, lessons, mileage and business expenses and produces a monthly statement, replacing manual record-keeping.

- Actively provide regular updates based on user feedback, new use cases, bug fixes, etc.

Via-AI — Node.js/Express, OpenAI API

- Built a multiplayer trivia web app that generates questions with an LLM, with 5 game modes, 13 themes and a subscription tier.

NFL Timeout Advisor — Python, simulation, pytest

- Wrote a decision tool that simulates game outcomes to recommend whether to call a timeout, reporting win probability with and without it and the standard error.
- Offers a command-line tool, a browser interface and a Python API, with automated tests.

Real-time Jeopardy-style quiz game — Node.js, Supabase, Railway

- Built a host-and-players quiz game where players join by room code and buzz in from their phones, with server-side game state and scoring.

Experience

AI Data Analyst — DataAnnotation Tech · Remote · 2025–Present

- Evaluate large language model responses for accuracy, relevance, tone and instruction-following, using structured rubrics.
- Write detailed feedback that identifies recurring model weaknesses and feeds into training data quality.
- Meet strict accuracy and consistency standards in a quality-controlled, independent remote workflow.

Warehouse Technician — Kingdom Technology Services · Katy, TX · 2021–2024

- Assembled and installed electronic and UV filtration components in a production environment.
- Wrote and documented improved assembly procedures for the team.
- Managed inventory and shipping for sensitive technical equipment.

Education

Bachelor of Music, Minor in Computer Science — Stephen F. Austin State University · Nacogdoches, TX · 2025
